

## NSX ANNOUNCEMENT

14 November 2018

### SunRice Releases Inaugural Sustainability Report

SunRice has launched its inaugural Sustainability Report, which sets out the Group's sustainability achievements, sustainability commitments in the year ahead, and serves as a basis for future sustainability reports and initiatives.

While this is SunRice's first report, sustainability has always been a priority for the business and this has been demonstrated in various ways, including: the outstanding efficiency of Australian rice growers; a 'zero tolerance' approach to bribery and corruption; the consistency of working condition standards across our international operations; and a commitment to publicly and transparently communicating our sustainability performance.

Sustainability is the foundation for SunRice's long-term success, and underpins our focus on establishing a reliable and traceable global supply chain. As our [Sustainability Charter](#) outlines, this means ensuring every link of our global supply chain, including the societies and communities in which we belong and the environments in which we work, is operated responsibly, ethically and sustainably. Establishing a sustainable supply chain is also a response to global demand for 'clean and green' produce, which is a centrepiece of our current five-year strategy.

The full Sustainability Report is available on the [website](#) and, if required, hard copies can be requested from the Company.
